The Research Department of Amate Electroacústica, s.l. proudly introduces the **MD2KTOP** Full Range Horn Loaded Speaker System. The high sound pressure level and outstanding sound quality make it suitable for a wide range of applications, from big Arrays in live events to individual rigging in disco applications.

El Departamento de Investigación de Amate Electroacústica, s.l. se enorgullece en presentar el nuevo sistema Full Range cargado por bocina **MD2KTOP**. El alto nivel de presión sonora y su elevada calidad de sonido lo convierten en un sistema ideal para un amplio rango de aplicaciones, desde Arrays de gran tamaño para eventos en directo hasta utilización multipunto en aplicaciones de discoteca.

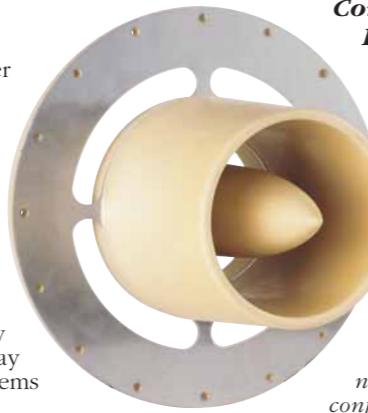

Neodymium Transducers.

Lightness and Reliability:

The new system **MD2KTOP** has the most advanced technology in **NEODYMIUM** loudspeakers and compression drivers, developed by our Research Department. The low-mid way uses a 12" woofer with 76 mm "sandwich" voice coil, high pressure aluminium chassis and exclusive cooling system of the magnetic circuit. The excellent acoustic performance and very low distortion contrasts with the lightness of this transducer. The high frequencies rely on a 3" Titanium diaphragm with Mylar suspension **NEODYMIO** driver, matched to the constant directivity horn by an aluminium phase plug exclusively designed for this system, which acts as a heatsink too! The hard temperature resistance tests carried out, following **EIA RS426A** Standards, guarantee a high reliability of the components used.

Phase Plug and Constant Directivity Horns:

The 12" Horn Loaded **NEODYMIO** woofer includes a double concentric phase plug which avoids the presence of stationary waves and extends the low-mid way response in the high frequencies. The low-mid horn has been developed following a **conical-exponential** configuration: conical to get a good control on beamwidth pattern and exponential to achieve a good response at low frequencies. The 30° x 30° mid frequency dispersion and 30° x 20° high frequency dispersion allows an easy and intuitive Array construction and minimizes the typical problems of this type of configurations.

Corrector de Fase y Bocinas de Directividad Constante:

El woofer de **NEODIMIO** de 12" es cargado por bocina e incorpora corrector de fase de doble cuerpo concéntrico. Mediante el fasador, se evita la formación de ondas estacionarias y se amplía la respuesta de la vía de graves-medios en altas frecuencias. La bocina de graves-medios ha sido desarrollada en base a una configuración **cónico-exponencial**: cónica para conseguir un buen control de la directividad y exponencial para tener una buena respuesta a bajas frecuencias. La dispersión de 30° x 30° en medios y de 30° x 20° para las altas frecuencias permite formar Arrays de manera simple e intuitiva, minimizando los problemas asociados a este tipo de configuraciones.

Passive Crossover with Power and Thermal Protection:

The **MD 2KTOP**, as do all other models of **Master Dynamic Power Series**, requires only one channel of **DPU Amplifiers** to feed the whole system. The internal crossover, "the heart of the system", divides the corresponding frequencies to each transducer with minimum losses; our exclusive **TPC** (Thermal Power Control) also allows the electronic control through a binary function of any sudden power increase which may damage the transducers. **State of the art TECHNOLOGY!**

Filtro Pasivo con Protección Térmica y de Potencia:

La **MD 2KTOP**, al igual que el resto de modelos de la Serie **Master Dynamic Power**, requiere sólo un canal del Amplificador **DPU** para alimentar el sistema. El filtro interno, "corazón del sistema", divide las frecuencias correspondientes a cada transductor con mínimas pérdidas; además, nuestro exclusivo **TPC** (Thermal Power Control) permite controlar electrónicamente mediante una función binaria, cualquier incremento brusco de potencia que pueda dañar los transductores. **¡TECNOLOGÍA al más alto nivel!**

Materials:

In its continuous research to offer the best product in all its levels, the **MD2KTOP** has been made of vibration and moisture-resistant birch plywood. All cutting and milling work, as well as drilling operations, has been developed by computerized numeric control machinery (CNC) which allows us to assure a perfect and accurate assembly. The high and low-mid horns have been made with **polyurethane fibres, through injection molding**. The finish, which uses totally ecological water-based acrylic resin paint, provides an excellent external protection.

And some other interesting details... :

The **MD 2KTOP** includes side handles for easy transport. The front side is protected by a **2 mm duraluminium grille** with acoustically transparent foam. Eight strategically positioned **Angra Tracks**, interconnected with steel reinforcements, allow an easy and safe Cluster configuration.

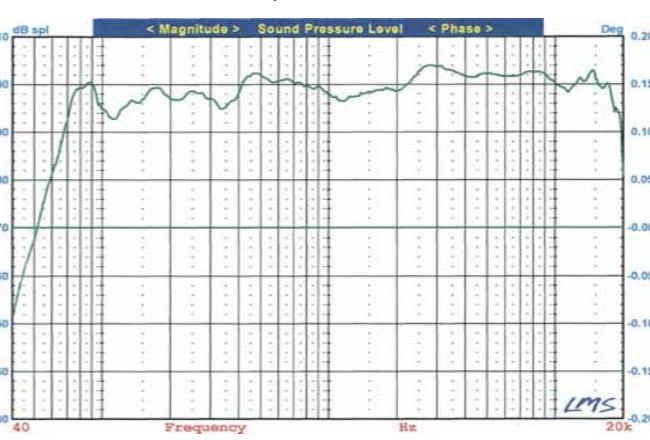

Los Materiales:

En su empeño por ofrecer las mejores prestaciones, la **MD2KTOP** ha sido realizada mediante tablero contrachapado multicapa de abedul de alta resistencia a las vibraciones y a la humedad. El corte y fresado se han desarrollado con maquinaria de control numérico computerizado (CNC) lo que permite asegurar una precisión y montaje perfectos. Las bocinas de agudos y graves-medios han sido fabricadas con **fibras técnicas de poliuretano de alta densidad, mediante moldeo por inyección**. Los acabados, con pinturas totalmente ecológicas de resinas acrílicas a base de agua, le aportan una excelente protección externa.

Y otros detalles de interés... :

La **MD 2KTOP** viene equipada de serie con asas laterales para su transporte y reja de duraluminio de 2 mm con foam acústicamente transparente. Ocho tiras **Angra Track**, estratégicamente distribuidas y conectadas internamente entre sí mediante refuerzos de acero, permiten una fácil y segura clusterización.

SPL RESPONSE 1W/2m with DPM:

Accessories:

To get an easy and safe Array configuration with the **MD2KTOP**, a Flying Hardware has been developed. All details have been meticulously thought out. Its construction, with rectangular high resistance tube and its finish, with Epoxy powder coating, protect it from mechanical and climatic attacks. Thanks to its locking pins, its telescopic arms allow the adjustment to the desired coverage angle when building the Cluster. The cargo tests carried out, of more than 4000 Kgrs per unit, assure its reliability and the possibility of hanging up to 10 systems from each Truss, keeping a safety factor of **10:1**.
